

Orbograph Releases Service Pack 2 for Enterprise Recognition Software Version 7.12

Now Certified for Latest Windows® Operating Systems and Includes Mark Sense Technology

Billerica, MA, July 15, 2008 - Orbograph Ltd., a leading developer of recognition solutions for the U.S. check processing and business process outsourcing markets, announced the release of Service Pack 2 (SP2) for its Enterprise Recognition Software Version 7.12.

This latest release, which follows the first-in-market Service Pack methodology introduced by Orbograph early this year, is certified for an extended range of operating systems, now including Windows Server® 2008 and Windows Vista®. It also features state-of-the-art Mark Sense technology. The high adoption rate of the virtualization platform, VMware® among financial institutions led Orbograph to certify this solution with all of its products as well.

"Our introduction of Service Pack methodology has been very well received by our business partners and end-users as a means for addressing their needs in a timely manner and giving them a competitive advantage," said Joe Gregory, Vice President Marketing at Orbograph Ltd. "64-bit operating systems are getting more mature and penetrating the mainstream. The new Windows Server 2008 is expected to become a "de-facto" industry standard soon. Vista, especially in the distributed markets, is already in demand from our business partners."

"Financial institutions are consolidating their POD and remittance platforms," explained Dr. Vladimir Shapiro, Orbograph's Product Manager of Recognition Solutions. "By adding a Mark Sense detection module, our users can benefit from utilizing the same engine for POD and remittance processing. This capability leverages intelligent check box detection, which is helpful in improving detection and accuracy rates for change of address, multi-functional deposit tickets and other layouts containing check boxes."

SP2 incorporates a number of additional enhancements, including an amount read rate increase on cash tickets, greater accuracy for internal documents containing dollar signs, optimizations to the statistical tool CAREporter, and improved automatic classification of IRD documents.

About Orbograph
