VSoft Announces the New 5.20 Release of its Centrum Gateway™ – ATM Software

With interfaces to industry leaders, NCR and Diebold, software provides a comprehensive deposit automation solution for financial institutions

ATLANTA--([BUSINESS WIRE](#))--VSoft Corporation, a global information and technology provider of process improvement solutions for financial institutions, announced the generally available release of its Centrum Gateway™ – ATM 5.20 software with interfaces to the NCR Corporation ImageMark™ ATM Passport software solution and Diebold, Incorporated's (DBD: NYSE) Opteva® ImageWay® ATM. NCR or Diebold ATMs that support image transmission can seamlessly integrate with VSoft's Gateway – ATM software that captures images at the ATM location for processing and image exchange.

With image-enabled ATMs and VSoft's Centrum Gateway – ATM envelopes are a thing of the past. When a customer deposits a check into an ATM, the software captures the check image and related data. Customers receive a receipt with an imprinted image of the deposited check(s) to verify the transaction, building trust and reinforcing the financial institution's credibility. VSoft's Centrum Gateway - ATM software allows image-enabled ATMs to provide gateway functions for the captured deposits, including collecting the captured images and data from multiple ATMs at a central location, virtual sorting, deposit review and providing inputs to VSoft's Digital Dashboard for enterprise-wide monitoring and insight into the institution's distributed capture network.

"NCR and VSoft have a history of partnering to customize and integrate unique software and service offerings for financial organizations," said Brian Bailey, vice president of Financial Industry Marketing for NCR Corporation. "An enterprise solution, NCR ImageMark Passport software is designed to help financial institutions automate and streamline the check deposit and payment process at the ATM and in the branch. With NCR's ImageMark ATM Passport and the VSoft Centrum Gateway – ATM software, financial institutions have a flexible solution that quickly captures a check image and related data at the ATM and then seamlessly integrates it with back office validation."

"Interfacing our ATMs with VSoft's ATM Capture software provides additional options for our clients," said Charles E. Ducey, Jr., senior vice president, global development and services, Diebold. "Check imaging is crucial in the payments industry, and our ability to offer institutions a solution that extends their imaging capabilities to the ATM will not

only provide a cost benefit, but will ensure outstanding service and added convenience for their customers.”

Because the Centrum Gateway - ATM software integrates with VSoft’s extensive set of back-office applications, financial institutions can seamlessly capture the check image at the ATM and exchange with an endpoint, achieving Straight Through Image Processing™ .

“Automating the entire life cycle of the ATM deposit provides financial institutions with competitive advantages in reducing operating costs, enhancing customer service and decreasing fraudulent items,” said Murthy Veeraghanta, president, VSoft Corporation. “The industry continues to move towards accepting deposits through ATMs, and by partnering with industry leaders such as NCR and Diebold, we can transform in-branch and remote-site ATMs into an extension of the distributed capture network, allowing financial institutions to benefit from check truncation at the ATM.”

About Diebold
